Theoretical and Applied Fracture Mechanics 5 (1986) 209
North-Holland

AUTHOR INDEX *

Volume 5 (1986)

Bargmann, H.W., Prediction of pressure vessel failure: a critical review of the probabilistic approach (1) 1–16
Bhargava, V., G.T. Hahn and C.A. Rubin, Analysis of cyclic crack growth in high strength roller bearings (1) 31–38
Bolton, R.C., see G.C. Sih (2) 125–132
Brown, K.C., see M.N. Janardhana (1) 51–55

Chao, C.K., see G.C. Sih (1) 39–45
Chen, C.K., see G.C. Sih (2) 101–107
Chu, R.C., see G.C. Sih (3) 151–161
Cranmer, D.C., Design of ceramic components using fracture mechanics concepts (1) 57–62

Fehervary, A., see A. Peter (1) 17–22

Gdoutos, E.E. and G. Papakaliatakis, The effect of load biaxiality on crack growth in non-linear materials (2) 133–140
Goldstein, R.V., Three-dimensional elasticity problems related to cracks: exact solution by inversion transformation (3) 143–149
Gough, J.P., see J. Morrison (2) 109–116

Hahn, G.T., see V. Bhargava (1) 31–38
Han, Z., see C. Ouyang (3) 163–172

Irwin, G.R. and G.C. Sih, Dynamic energy release rate expression for a spreading circular fracture pattern in a plate (1) 47–50

Janardhana, M.N., K.C. Brown and R. Jones, Designing for tolerance to impact damage at fastener holes in graphite/epoxy laminates under compression (1) 51–55
Jeong, D.Y., see O. Orringer (2) 63–95
Jones, R., see M.N. Janardhana (1) 51–55.

Kobayashi, A.S., see M. Ramulu (2) 117–123

Michopoulos, J.G., see C.G. Sih (1) 23–30
Morris, J.M., see O. Orringer (2) 63–95
Morrison, J. and J.P. Gough, Chevron notched short bar testing of high toughness steels (2) 109–116

Orringer, O., J.M. Morris and D.Y. Jeong, Detail fracture growth in rails: test results (2) 63–95
Ouyang, C. and Z. Han, Computations for deep boundary cracks (3) 163–172

Papakaliatakis, G., see E.E. Gdoutos (2) 133–140
Peter, A. and A. Fehervary, Evaluation of acoustic emission from pressure vessels with planar flaws (1) 17–22

Ramulu, M. and A.S. Kobayashi, Strain energy density criteria for dynamic fracture and dynamic crack branching (2) 117–123
Rhodes, D. Fracture mechanics of multiple load path structure (2) 97–100
Rubin, C.A., see V. Bhargava (1) 31–38

Selvadurai, A.P.S., see C.L. Tan (3) 181–188
Sih, G.C. and R.C. Bolton, Prediction of thermally induced fracture from notch and crack front (2) 125–132
Sih, G.C. and C.K. Chao, Static and fatique behavior of metal cylinders with enhanced surface property (1) 39–45
Sih, G.C. and C.K. Chen, Growth of crack caused by temperature gradients with change in surface insulation (2) 101–107
Sih, G.C. and R.C. Chu, Characterization of material inhomogeneity by stationary values of strain energy density (3) 151–161
Sih, G.C. and J.G. Michopoulos, Nondestructive detection of damage in aluminum: electromagnetic discharge imaging (1) 23–30
Sih, G.C. and D.Y. Tzou, Dynamic fracture rate of Charpy V-notch specimen (3) 189–203
Sih, G.C., see G.R. Irwin (1) 47–50
Smith, E., The stability of growth of a through-wall circumferential crack in a pipe subject to combined bending and tensile loadings (3) 205–208

Tan, C.L. and A.P.S. Selvadurai, Internally indented penny-shaped cracks: a comparison of analytical and boundary integral equation estimates (3) 181–188
Theotokoglou, E.E., see G. Tsamasphyros (3) 173–179
Tsamasphyros, G. and E.E. Theotokoglou, Crack approaching perpendicularly the boundary of a rectangular sheet: an integral equation and finite element solution (3) 173–179
Tzou, D.Y., see G.C. Sih (3) 189–203
